## Projects

TASIFY - It is used on task management .With the sleek design of SHADCN-UI and customizable flair of tailwind CSS TASIFY offers an unparalleled user experience. I have use next server actions with help of client side and Server Side rendering. It helps organization to manage their task with different board I have used neon Database and Prisma for connection for database, UPSLASH for images on board, clerk for authentication. I have used server action to reduce the load of web app .and have used stripe for payment.
